

# PC+ | A Game Launcher Platform |

PC+ is a web app that lets users browse a curated catalog of games, view game pages with images and ratings, and manage a virtual game library after a simulated checkout.

Presented by Team 4: Michael Ramcharitar, Eddy Arriaga-B

## The Problem We Solve:

- Publishers struggling to find customers
- Players struggling to discover quality indie games

# System Actor Overview

Our platform has 2 users, customers, and publishers, both of which can make accounts and access them locally

This allows both users to communicate and reflect changes across both sides, for example, games made in the publisher role show up properly on the customer home page

## Customer

- Create and manage account
- Browse / search games
- View game details
- Purchase and download games
- Access personal game library
- Rate games purchased

## Publisher

- Create and manage account
- Upload new game listings
- Edit pricing and details
- Update system requirements
- Remove games from platform
- View sales analytics

# Customer Interactive Flow

Customers experience of purchasing / playing a game on our website:

01

## Login/Sign Up

Secure account creation, having multi user access with different secure logins, different permissions and accesses

02

## Browse Games

Find games through a simple search bar, categories, and recommendations, complete with detailed descriptions as well

03

## Viewing Game Details

Access game pages that have screenshots of the game, ratings, game requirements, and more to make better decisions

04

## Purchase

You can pay in our pretty quick auto buy system, that automatically brings the game over to the library

05

## Library Access

You can manage your games, launch and rate them, as well as clear your library if needed

# Publisher Game Management

Publishers can efficiently manage their game catalog and optimize their presence on the platform through a streamlined process.

01

---

## Upload New Games

Submit new games with pricing, descriptions, and system requirements, as well as images, these games reflect on the customer side

02

---

## Edit Listings

Update games that are already uploaded, change pricing or requirements, and the images

03

---

## Manage Inventory

Remove games from the website, and it updates insights on the dashboard
